Where there's light there's now internet

A paradigm shift

Using light waves to communicate. Sounds pretty amazing, right?

Well, internet use is exploding. Video streaming. IoT devices. Cloud-based services. With data traffic increasing exponentially, many in-house networks are literally running out of bandwidth.

So, here's the next big thing: use light waves to carry the data. Rapidly, reliably, securely.

At Signify they know a thing or two about light. With a JuneLiFi pwd by Signify solution you can transform any lighting infrastructure to provide a fast and secure internet connection, even in places where regular radio wave connections are poor. It's game-changing technology. A true paradigm shift.

JuneLiFi from the world leader in lighting, Signify, provides a two-way wireless connection that is reliable, secure and fast.

Smart and simple

Simply put, JuneLiFi pwd by Signify systems modulate the light waves to transmit data using a transceiver. Then, all you need is a USB access key, which can be plugged into your laptop or tablet to receive and send data.

And unlike other LiFi systems, it works whether the room lights are on, dimmed or off. So it's 24/7. Just like your business.

Create new internet highways everywhere

JuneLifi benefits all sorts of work environments:

Public areas
Ensures secure access to data in public areas

Industry
Connects factory machines enabling the transition to Industry 4.0

Office
Enhances the value of multi-tenant office workspaces

Hospitality
Improves the guest experience in hospitality locations

250 Mbps

Fast
Downlink/uplink rates of up to 250 Mbps.

ITU G.9991

Reliable
Guaranteed bandwidth. No interference. ITU G.9991 LiFi standard.

AES 128-bit

Secure
AES 128-bit encryption. Communication area strictly defined. Light waves can't penetrate walls! So, it's as safe as wired communication.

Taking the internet where it's needed

Multi-tenant offices

Several trends in the evolution of business buildings are increasing the demand for better connectivity in the office environment:

Trends in the office space

Flexible workspaces
(>1 person per workplace)

Increased use of
cloud-based work

More online collaboration
tools (like Skype™, Teams™)

More "rent a spot"
"hot desking"

For real estate owners and developers, JuneLiFi pwd by Signify can potentially increase the value of their property by offering business renters stable, fast and secure network access alongside their current platform.

Coverage for mobile devices is improved. And by integrating this communications capability directly into the lighting system, the ceilings remain clutter-free – preserving the aesthetics of the building.

JuneLiFi pwd by Signify is ideal for open plan office spaces, flex-desk areas, and rooms requiring high-speed internet connections for online meetings and the like.

Smart hand-over and interference management turn wireless connectivity into a hassle-free experience. And the provision of access keys and strictly defined communications areas ensures absolute security at all times.

Case study

We are making History!

JuneLiFi pwd by Signify has made history by installing the first ever LiFi solution in a scholastic environment here in the United States. We are proud to announce our partnership with Lawrence Woodmere Academy in Long Island, NY. LWA is over 100 years old but keeps up with the times in a very BIG way. With the building of their all NEW state of the art STEM center, they wanted to bring in the NEXT 4th Industrial revolution technology - Light Fidelity, or LiFi.

LWA is adopting LiFi in their Robotics and Gaming room at the onset and will be ringing in the NEW YEAR by installing it in their main computing room in January 2022.

Taking the internet where it's needed

Hospitality

When it comes to entertaining and accommodating people, hospitality businesses are often the trendsetters in the digital evolution:

Trends in hotels

Wireless connectivity is a must have for any hotel

Guests expect the same quality as in office or home

More online content and video streaming services

Online help desk tools.

To differentiate their services, hotel owners and franchisees catering to the business traveler are constantly looking for new ways to satisfy the needs of these discerning users. Providing a reliable and premium internet connection – one that is fast, hassle-free and highly secure – is a natural next step.

The JuneLifi solution offers a new opportunity for hotel chains, as well as an additional revenue stream to delight their guests. Own-brand USB access keys can

be provided, which allow users to enjoy a high-speed, secure connection of up to 150 Mbps that is kept separate from others used in adjoining rooms.

To guests then, JuneLifi offers a private, stable, secure and dedicated wireless network connection that is much faster than the usual WiFi connectivity. Guests can make use of LiFi hotspots in meeting rooms, lounges and guestrooms, where the network connections are simply plug and play.

Your location?

Not all hotels are equal!

We are already creating pockets of excellent connectivity in the hotel world. From dedicated networks in conference facilities and LiFi hotspots in lobby areas to fast, secure communications in bedrooms. Will your hotel be next?!

Taking the internet where it's needed

Industry 4.0

As factory automation evolves along the road to Industry 4.0, digitalization can be seen affecting several business areas:

Trends in industry

Customer centricity

Smart global supply chain

Digital Factory

Intelligent distribution

Manufacturing and logistics operators (as well as related businesses) are increasingly in need of real-time data and control. For example, on last-yards connections and to control smart vehicles.

JuneLifi from Signify offers a robust, low latency, and highly stable broadband connection, one that is every bit as good as a wired connection, or in other words, 'stable as a cable... but wireless!'. And it's ideal for places where wireless connectivity is poor or restricted.

With up to 250 Mbps connectivity to the backbone of an industrial network, machines up to eight meters away can be controlled faultlessly. This always-on, dedicated connection also ensures seamless hand-over as well as high-level security. And, it can be combined with existing lighting.

Our clients and partners become a part of a bigger mission!

Greener Eithiopia

With each piece of hardware we sell at JuneLifi pvd by Signify we donate trees! We have a wonderful relationship with Greener Eithiopia. They are responsible for planting over 30 million trees and counting!

Public areas

The mobile generation expects ubiquitous access to the internet. But security concerns are driving new needs in public buildings and other areas:

Trends in the public segment

Digitalization of services

Increased use of cloud-based work

High security

High demands for public visiting more online

The trend to more flexible work environments as well as the increase in online services has created more freedom for people... but it has also increased concerns about security. Walls have ears, right? The truth is, many password-protected networks are vulnerable.

LiFi – can protect this freedom while maintaining data security, because light does not travel through walls. In essence, it's as immune to eavesdropping as a cable would be!

JuneLiFi pwd by Signify leverages the existing lighting ecosystem of any building, offering a faster connection (up to 150 Mbps) and superior performance over WiFi. Used in addition to the regular network, it frees capacity for mobile phone users.

JuneLiFi – the best lighting and the best connectivity, combined in a clutter-free solution!

Case study

Philips Stadium Eindhoven

Signify is responsible for the LiFi installation at the stadium. They were able to offer journalists, supporters and business guests an internet connection that matches the Champions league status of their club. Visitors can now communicate at lightning speed, reliably and securely!

We know that LiFi is a new technology and the majority of people have not really heard of it. Please contact us so we can, if anything, have a conversation about this life changing technology.

Do we hope it will be the right fit for your environment? Absolutely! If not today, maybe in the future. All in all, we look forward to hearing from you!
